## Week 3 Quiz

**⊘** Correcto

Calificación de la entrega más reciente: 100 %	
Why does sequence make a large difference when determining semantics of language?	

1.	Why does sequence make a large difference when determining semantics of language?	1/1 punto
	O Because the order of words doesn't matter	
	O It doesn't	
	O Because the order in which words appear dictate their meaning	
	Because the order in which words appear dictate their impact on the meaning of the sentence	
2.	How do Recurrent Neural Networks help you understand the impact of sequence on meaning?	1/1 punto
	They look at the whole sentence at a time	
	They shuffle the words evenly	
	○ They don't	
	They carry meaning from one cell to the next	
3.	How does an LSTM help understand meaning when words that qualify each other aren't necessarily beside each other in a sentence?	1/1 punto
	Values from earlier words can be carried to later ones via a cell state	
	They shuffle the words randomly	
	○ They don't	
	They load all words into a cell state	
4.	What keras layer type allows LSTMs to look forward and backward in a sentence?	1/1 punto
	O Bilateral	
	○ Unilateral	
	Bidirectional	
	○ Bothdirection	

5.	What's the output shape of a bidirectional LSTM layer with 64 units?	1 / 1 punto
	(128,None)	
	(None, 128)	
	(None, 64)	
	O (128.1)	
6.	When stacking LSTMs, how do you instruct an LSTM to feed the next one in the sequence?	1/1 punto
	Ensure that they have the same number of units	
	Ensure that return_sequences is set to True only on units that feed to another LSTM	
	O nothing, TensorFlow handles this automatically	
	Ensure that return_sequences is set to True on all units	
7.	If a sentence has 120 tokens in it, and a Conv1D with 128 filters with a Kernal size of 5 is passed over it, what's the output shape?	1 / 1 punto
	(None, 120, 128)	
	(None, 116, 128)	
	(None, 116, 124)	
	(None, 120, 124)	
8.	What's the best way to avoid overfitting in NLP datasets?	1 / 1 punto
	○ Use LSTMs	
	○ Use GRUs	
	○ Use Conv1D	
	None of the above
